

Company Profile

The Right Move for Your Business

Your partner in ocean, air and special cargo logistics

BARUN LOGISTICS CO., LTD.

Good logistics starts with understanding your cargo

We start by understanding your cargo and shipping requirements. Drawing on our experience with construction equipment and project cargo, we plan and coordinate ocean, air and inland transport.

International logistics, from planning to delivery

From our Busan headquarters and Seoul office, we provide international logistics services and consulting across ocean, air and inland transport, cargo handling, customs clearance and storage.

Project cargo prepared for shipment.

Your business and your cargo

We consider your import and export schedules, site conditions and cargo characteristics. From transport selection to on-site operations, we coordinate each stage to keep your shipment moving smoothly.

A wider view of logistics

Your cargo represents your ambitions and hard work. We draw on our field experience to find better ways to transport it, helping you manage logistics costs and improve the efficiency of your daily operations.

LOCATIONS

Busan & Seoul

BUSINESS

Freight Forwarding

We know the equipment

We understand on-site operations

We assess each machine's structure, dimensions and weight. By comparing container ships, breakbulk vessels and vehicle carriers, we select a suitable shipping method for the equipment, quantity and destination.

Dismantling and packing

Our cargo management engineers are licensed to operate construction equipment and industrial vehicles. They safely dismantle and pack machinery to prepare it for shipment.

Support at overseas sites

We deploy engineers and shipping specialists to overseas sites for dismantling, reassembly and loading. Our team helps maintain the same standard of care and handling throughout the work.

Better use of space

Better shipping solutions

Special container loading planned to suit the equipment and available space.

Rethinking the load plan

We develop alternatives to conventional shipping methods to help reduce logistics costs. By adjusting load arrangements, equipment combinations and container configurations, we make better use of available space.

Experience in every plan

We draw on field experience and simulations to develop each plan. Before loading begins, we assess feasibility, handling requirements and potential risks to ensure the proposed method suits the cargo and site conditions.

On-site supervision throughout the operation

Our cargo management team supervises on-site operations, checking that loading, handling and cargo securing follow the transport plan and applicable safety requirements.

On-site supervision of construction equipment handling.

Careful supervision at every stage

CFS operations

We supervise cargo handling, container stuffing and unstuffing, lashing, shoring and gate-in/gate-out operations. At each stage, we inspect the work and apply safety procedures to help prevent accidents.

Breakbulk loading

We supervise loading in line with the stowage plan and check lifting points and lifting gear in advance. On board, we oversee lashing and securing, including the selection and placement of suitable dunnage.

Operations at your site

For stuffing or unstuffing at a factory or customer site, we arrange forklifts, cranes and other necessary equipment. We supervise the work and provide suitable materials so that lashing meets the same standards as at the CFS.

One dedicated team for every stage

Logistics consulting from shipment planning to final delivery.

End-to-end consulting

International shipments involve more than the main transport leg. We coordinate packing, inland transport, cargo handling, customs clearance and storage with ocean, air or rail services, from origin to destination.

Dedicated forwarding team

We form a dedicated team with staff from each relevant department.

The team understands your cargo and requirements, responds promptly and coordinates information and work across every stage.

LOGISTICS FLOW

01	Preparation	Export packing and origin transport Prepare the cargo and arrange collection.
02	Origin	CFS, storage and export customs clearance Coordinate cargo receipt and export formalities.
03	International freight	Ocean, air or rail transport Select the mode and route for the shipment.
04	Destination	Import clearance, delivery and storage Arrange final delivery and cargo handover.

Container shipping

Regular liner services connect a wide range of destinations on scheduled routes. We select container types and shipping options to suit your cargo, required timing and destination, including solutions for oversized loads.

Container condition checks before shipment

Container services

FCL / LCL / Reefer / DG / ISO Tank / SOC

We arrange container services for a wide range of cargo, selecting equipment and shipment options to suit your needs.

Special containers

Open Top / Flat Rack / Super Rack

We select special containers and loading methods that allow suitable oversized cargo to move on regular liner services.

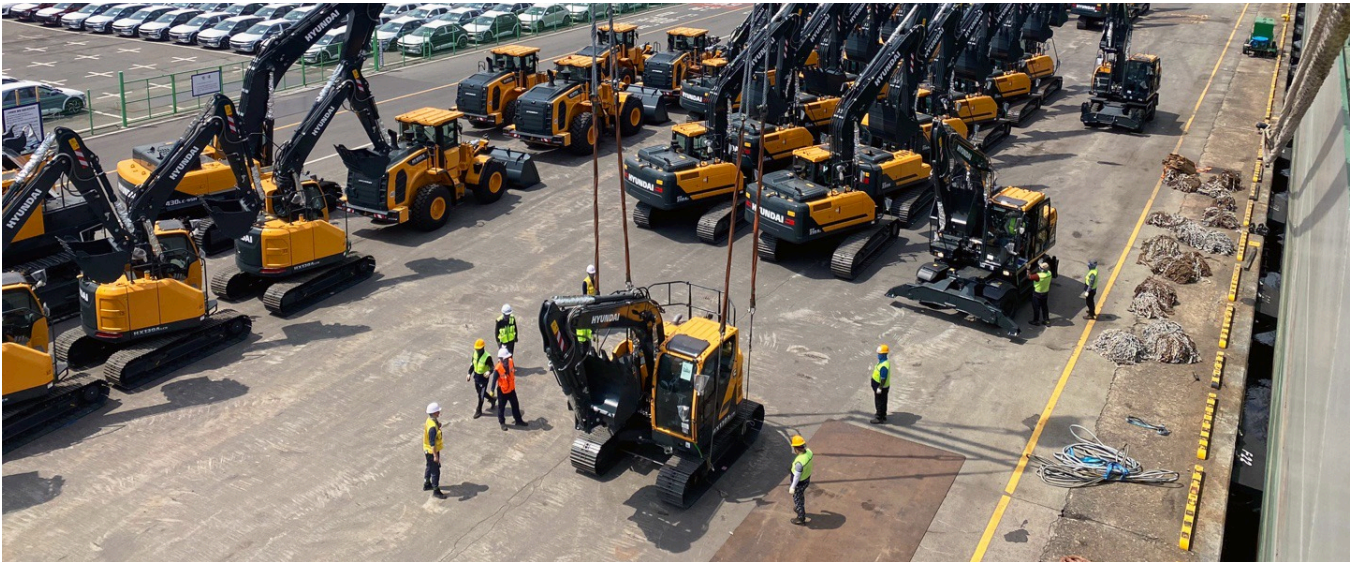

Breakbulk on container vessels

Flat racks used as a loading platform

Multiple flat racks can form a platform for oversized cargo on a container vessel, including cargo requiring urgent shipment.

Breakbulk & chartering

Vessel selection depends on the cargo, volume and trade requirements. We assess vessel availability, lifting capacity and port handling conditions to arrange a suitable shipping solution.

Construction equipment loading planned around cargo volume and handling requirements.

The right vessel for your cargo

General cargo and bulk vessels can carry heavy machinery, industrial equipment and project cargo. We assess cargo dimensions, weight and port handling conditions to select a suitable vessel and loading method.

Chartering for your shipment

We arrange Small Handy to Ultramax charters for machinery, steel and dry bulk cargo, including ore, coal and grain. Vessels are selected to suit the cargo, route and required shipping window.

Tank wagon loading on a bulk vessel

Ro-Ro & PCTC

Pure car and truck carriers (PCTCs) transport self-propelled vehicles and construction equipment. Their roll-on/roll-off loading method also enables efficient handling of suitable heavy cargo with fewer lifting operations.

Matching the vessel to the load

We review equipment type, quantity and destination alongside available vessel services. Dimensions, weight and operating characteristics help determine whether a vehicle carrier is a suitable option.

Comparing transport options

We compare vehicle carriers with container and breakbulk services. We assess the characteristics of each equipment model and the shipment volume to recommend a shipping solution that suits your cargo.

Ro-Ro shipping using a Mafi trailer

Air freight

Air freight is well suited to urgent shipments and smaller, high-value cargo. We assess delivery deadlines, cargo characteristics and flight options to arrange the right service for your shipment.

Cargo requirements first

We assess the cargo's size, weight, value and urgency before proposing an air freight solution. We coordinate packing, handling and inland transport so the cargo is ready for its scheduled flight.

Coordinating flights and timing

We review flight schedules and available cargo space against your delivery deadline. Our team coordinates bookings and related logistics, keeping shipment information up to date throughout the journey.

Inland transport

We arrange inland transport for small consignments as well as long, heavy and oversized loads. We select vehicles and handling methods to suit the cargo and site conditions, and also coordinate bonded transport.

Vehicles and handling methods selected to suit oversized cargo and site conditions.

The right equipment for the route

Dimensions, weight, loading access and delivery conditions all affect the transport plan. We coordinate the required vehicles and handling equipment to connect the port, warehouse, factory and final destination.

Transport equipment

Cargo trucks and wing-body trucks

Flatbed and low-bed trailers

Container trailers

Self-propelled modular transporters (SPMTs)

Handling, storage & packing

We coordinate cargo handling, storage and packing as part of your shipment, taking into account the cargo's quantity, characteristics and transport requirements.

Cargo storage and on-site checks

Cargo handling and storage

Our experienced team coordinates cargo handling, including container stuffing and unstuffing, with care for on-site safety. We arrange storage to suit the type and quantity of goods and the shipping schedule.

Heavy cargo handling by crane

Packing and lashing

Export packing and lashing are tailored to the cargo's shape, characteristics and transport mode. We prepare and secure each load with the handling and transit conditions in mind.

Packing and securing to suit the cargo

Additional services for international shipments

We work with specialist partners to arrange the supporting services your import and export shipments require.

Customs clearance

We arrange import and export clearance through customs brokerage partners with expertise in the relevant cargo and trade requirements.

Insurance

We help arrange cargo insurance, carrier's liability insurance and export guarantee insurance to suit the transaction.

Cross-trade logistics

We coordinate shipments between overseas origins and destinations through WCA partners, including the local services required at each end.

Exhibition cargo

We plan transport around exhibition schedules and advise on ATA Carnet customs procedures and cargo handling requirements.

Rail transport

Rail services to Russia, Mongolia and the CIS region via the TSR, TCR and TMGR routes.

Container purchase & resale

We assist with container purchases and arrange local resale at overseas destinations.

Global connections

Local expertise

We combine our global partnerships with local expertise to coordinate international transport and destination services. Our partners help us plan around cargo requirements and local operating conditions.

WCA

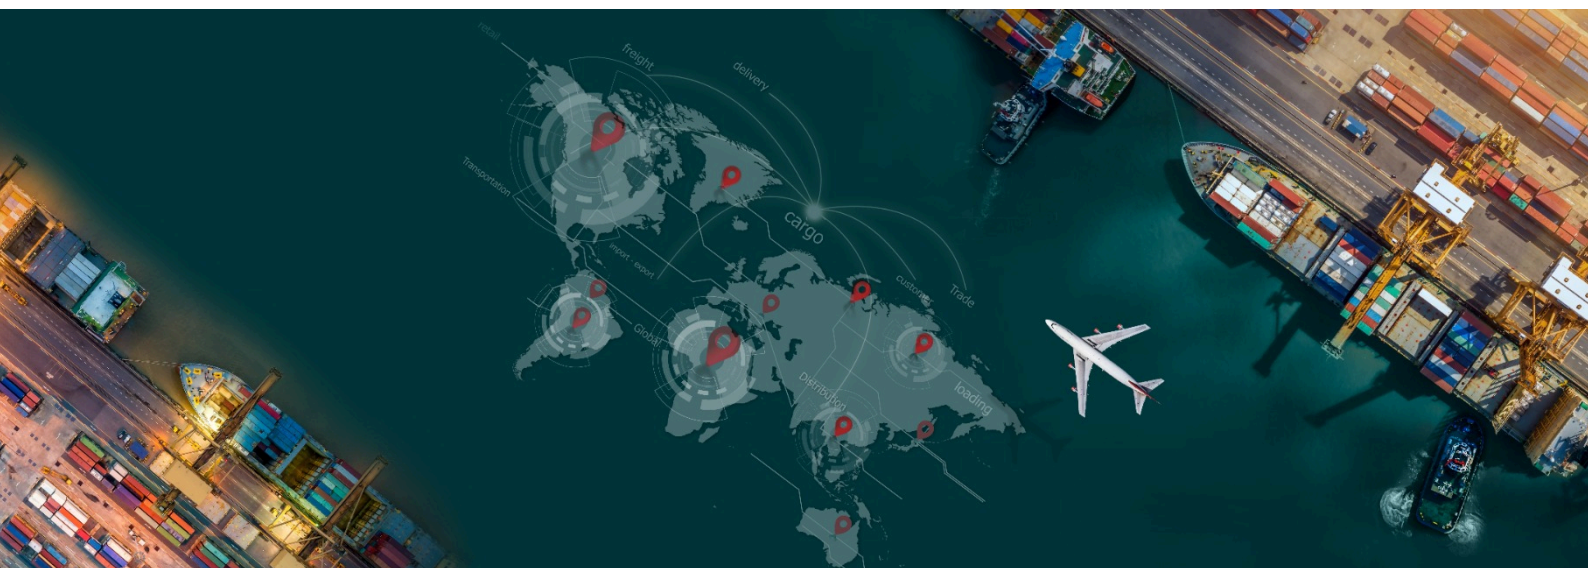

International forwarding network

As a WCA member, Barun Logistics works with international forwarding partners around the world. These relationships support coordination at origin and destination, combining local experience with a consistent approach to shipment management.

OOG II

Oversized and project cargo

As an OOG II member, we work with specialists in out-of-gauge, heavy-lift and project cargo. We share expertise and coordinate multimodal transport to suit local handling conditions and regulatory requirements.

Supporting trade across industries

We transport cargo for customers in construction equipment, industrial goods, energy and other sectors.

Growth in expertise and capabilities

Developing our services, people and systems since 2014.

2014	Established Barun Logistics and registered the shipbroking business
2015	Began Philippines-bound shipments for Hyundai Heavy Industries' construction machinery division
2016	Registered freight forwarding and insurance agency businesses and opened the Seoul office
2017	Registered the Auto Rack Container trademark and patents. Began HCE shipments to Indonesia, Myanmar and Taiwan
2018	Registered the shipping agency business and obtained venture enterprise certification
2019	Achieved ISO 9001:2015 certification, received a ministerial commendation from the Ministry of SMEs and Startups and relocated Busan headquarters
2020	Achieved AEO certification and relocated the Seoul office to Okin-dong
2021	Selected as a Youth-Friendly SME and a Talent Development SME
2022	Appointed as an import/export logistics provider for Hyundai Genuine
2023	Registered with the U.S. Federal Maritime Commission (FMC)
2025	Accredited as an IATA cargo agent
2026	Designated as a Busan Leading Service SME

Integrity in our work

Commitment at every step

The cargo we transport represents our customers' ambitions and hard work. We look for better ways to move it, helping customers reduce logistics costs and improve the efficiency of their operations.

Integrity

We work honestly and take responsibility for seeing each task through.

Expertise

We tailor transport methods and assign a dedicated team to your shipment.

Innovation

We develop new logistics solutions and specialized container designs.

Shared growth

We respect customers, support employees and contribute to society.

Customer focus

We listen to our customers and tailor our services to their business goals.

Transparency

We promote transparent management and open communication.

We understand your business and work with you to find the right solution.
